<b>PRE-QUALIFIED FOR</b>	Civil engineering Environmental engineering Structural engineering
<b>STATEMENT BY FIRM</b>	<p>Hoyle, Tanner &amp; Associates, Inc. (Hoyle, Tanner) is an established consulting engineering company with offices in Maine, New Hampshire, Vermont, Massachusetts, Florida and the USVI. Since 1973, Hoyle, Tanner has provided municipal, state and federal clients with a wide range of services in the transportation, land development, structural, environmental and aviation, planning and engineering fields. Our full-time staff consists of over 100 professional engineers, planners, technicians and support staff.</p> <p><b>Civil/Site</b> Hoyle, Tanner's civil/site work is directed toward the study, inspection, design, rehabilitation, construction administration, and resident engineering elements of projects including public works facilities, schools, parks, corporate/industrial/commercial facilities, housing developments, roads and streets, bridges, sanitary sewer and water systems, dam rehabilitation as well as solid waste, storm drainage and other utility systems.</p> <p><b>Structural</b> Hoyle, Tanner provides structural engineering evaluation and design, construction management and administration, as well as resident engineering for many projects throughout New England and specializes in the inspection, design, and rehabilitation of buildings including public works facilities, industrial and commercial facilities.</p> <p><b>Environmental</b> Our environmental engineering efforts are focused on environmentally compatible development such as the design of water supply, treatment, and distribution facilities and wastewater collection, treatment, and disposal treatment plants as well as solid waste. Other experience includes wetland delineation and permitting and environmental impact studies. Our environmental engineering department has also served airports, including stormwater runoff, glycol containment systems, and hazardous waste management. With a 42 year track record, Hoyle, Tanner remains committed to traditional engineering and planning values that reflect consideration for long-range objectives such as cost-effectiveness and aesthetics. Designs involving state-of-the-art technology not only can be, they must be, sensitive to and compatible with the natural and man-made environment surrounding them. Our technical services and capabilities are all directed to achieving one basic objective: to serve as an extension of our client's staff, and thereby help them achieve their goals. We believe that our success is measured by the success of our clients in accomplishing their objectives, today and into the future.</p>
